

COPPER / METAL BRAIDS

Flexible copper braids

- Capillary braids (0.10 - 0.15 - 0.20 mm)
- Cross-sections from 0.22 mm² to 35.0 mm²
- Materials used: red copper, tinned copper, nickel-plated copper, brass, bronze and stainless steel.
- Cabled braids with power terminals and protective isolating sheaths for general flexible connections.
- Manufacture of braids with custom cross-sections and formations to order.

Super-flexible copper braids

- Capillary braids (0.05 - 0.07 mm) and laminated braids used for sliding contacts for slot cars and for the production of brushes in general electrical contacts.
- Copper wire braids with synthetic compounds for super-flexible connections used in the railway sector.
- Metal braids used for slot car tracks.
